# FIRE ENGINEERING

Among the services offered by SFRE & SFE in the field of safety, firefighting design covers a preponderant role. With its team of Firefighting Professionals, SFRE & SFE will accompany the customer throughout the procedure necessary to be able to start each type of activity in compliance to current fire prevention regulations.

The contribution that SFRE & SFE aims to give in this sense consists in a 360 degrees operation in the management of firefighting practices and in relation with public and private entities involved in the implementation of the work. The client can therefore delegate the technical management of this complex and articulated process to specialized technicians, in possession of the necessary skills and experience to face any situation. This reliability is given by many years of experience in the field of this discipline, which has allowed to optimally deal with several hundred fire prevention practices, relating to properties in each sector.

The activity of SFRE & SFE is done according to the standard procedures which starts with the first design phase, continues with the subsequent monitoring activities on site for the construction work and the preparation of the related documentation for the establishment of the technical firefighting file, and ends with the presentation of the Firefighting SCIA for the release of the Fire Prevention Certificate (CPI). The whole design phase is created through the innovative BIM methodology. SFRE & SFE are prepared in every way to work efficiently on every design platform used in the engineering field.

SFRE & SFE guarantee capillary coverage on a national scale, being able to guarantee operations on any area of the territory.

The quality of the service done by SFRE & SFE is guaranteed by a constant update on the innovations introduced by the fire prevention regulations, first of all the D.M. 03/08/2015 and the D.M. 18/10/2019.

Among the objectives of SFRE & SFE, the predominant position is to always aim to operate according to a principle of maximum resource management efficiency, in order to achieve the guaranteed goal at the lowest possible cost for the customer. This objective is pursued, among other methods, with the Fire Safety Engineering (FSE) approach.

SFRE & SFE also offer advice and assistance in the subsequent maintenance of the safety requirements and standards required for compliance of your business with the fire prevention regulations, through technical appraisals (Technical Due Diligence), monitoring services (Audit) and Periodic Renewal of the Fire Compliance Certificate.
